# **Report on the Survey of Graduating Students: 2010-11**

Western's Strategic Plan, **Engaging the Future** affirms the importance of assessing the University's performance in its primary missions of teaching and research. A significant component of this evaluative process is the measurement of the learning experience of our students.

In February 1995, the President and Vice-Presidents initiated a voluntary, confidential exit survey, sponsored by the Provost, to determine undergraduates' perceptions of the quality of their educational experiences and their satisfaction with facilities and academic support services at The University of Western Ontario. The Survey of Graduating Students continues both to provide information for planning and to reinforce the University's commitment to excellence.

## **The Survey Questionnaire**

The 2010-11 Survey of Graduating Students (attached as Appendix A) was a 16-item questionnaire in which graduates rated their satisfaction with academic courses and programs, the quality of instruction, the degree to which their university experience enhanced a range of abilities and skills, and their satisfaction with Western's physical facilities and administrative services. Graduates were also asked to describe their reasons for pursuing post-secondary education and for choosing Western, their living arrangements and funding sources while at university, their education-related debt upon graduation, and their plans for future employment or study. Minimal identifying information about Faculty or College, academic program, full- or part-time status, and gender was requested. Three open-ended questions provided an opportunity for graduates to offer comments about their experiences at Western and their suggestions for improving the University and the Survey itself.

## **Survey Procedure**

### **Questionnaire Distribution**

A web-based survey including an explanatory letter was made available to a total of 5,481 undergraduate, certificate, and diploma students who were registered at the Constituent University and who were, at the time of distribution, expected to graduate at the Fall 2010 or Spring 2011 Convocations. The cover letter enlisted students' cooperation and assured them that participation was voluntary, responses would be treated confidentially, and only aggregate data would be published.

### **Response Rate**

Of the 5,481 questionnaires distributed to graduates of the Constituent University, 1,011 completed questionnaires (or 18.4%) were received.

Table 1 shows response rates, by Faculty of registration, for the 1,011 respondents who identified themselves as registered at the Constituent University.

The respondents were characteristic of graduates in marital status, immigration status, and applicant type, but females were more heavily represented among respondents. With this caveat, respondents can be regarded as representative of the Fall 2010 and Spring 2011 graduating classes as a whole.

### **Limitations**

When interpreting the results of the survey, it should be noted that the methodology permits only relatively global generalizations to be made. The number of respondents is not large enough to permit meaningful analysis at the level of academic Departments or individual programs. Despite the small sample sizes within departmentalized Faculties, it is entirely reasonable to expect differences in responses at this level. Furthermore, these differences will be both above and below the Faculty average and as a result the reader should not assume that the Faculty-level responses will mirror the responses at the Department level. Available resources and existing physical structures also vary significantly across campus. Some Faculties/Departments have the benefit of newer buildings and/or recent renovations, and these factors may affect the rankings of specific Faculties. Furthermore, it is very likely that some respondents have allowed bleak job prospects to affect their responses.

In addition, the present questionnaire does not take into account respondents' degree of experience with items that they are rating. Although the survey format did offer respondents the option of indicating which items were "not applicable" to them, it is not possible to distinguish the opinions of students with limited exposure to certain facilities or services from those who have used them extensively.

Distortion or loss of specific recollection may affect responses to some questions, particularly Questions 10 and 11, where respondents ranked reasons for pursuing postsecondary education and for choosing The University of Western Ontario. In most instances, graduates would have made those decisions 4 to 6 years ago.

In Question 9, respondents indicated their current plans upon graduation. It is important to note that these questionnaires were distributed in April and May for June graduates and therefore the responses to Question 9 reflect the students' employment status or plans at that particular time. If the survey were to be distributed 6 months after Convocation it could perhaps yield different results.

Although generally positive, the results of the survey point to areas that deserve more extensive study to determine whether changes are warranted. For example, the results suggest the need to determine why graduates were only moderately satisfied with campus food outlets, career services and financial and scholarship services. Similarly, within certain academic units, more information should be sought in response to lower satisfaction ratings about teaching quality, academic programs, and facilities.

Faculties, Colleges, and support units that require more detailed feedback might consider gathering supplementary information through questionnaires, interviews, or focus groups with the current student or graduate populations.

Despite these limitations, the Survey of Graduating Students seems capable of revealing larger trends in students' attitudes and opinions. In future, as changes to academic programs, support services, and

---

facilities are introduced at Western, the views of graduates who returned the survey can serve as a benchmark against which the effects of changes may be measured.
